NOTICE OF AVAILABILITY

LIMITED COPIES OF THIS REPORT ARE AVAILABLE AT NO COST BY WRITTEN REQUEST TO:

MASSACHUSETTS DEPARTMENT OF ENVIRONMENTAL PROTECTION
OFFICE OF WATERSHED MANAGEMENT
P.O. BOX 116
40 INSTITUTE ROAD
NORTH GRAFTON, MA 01536

Furthermore, at the time of first printing, eight (8) copies of each report published by this office are submitted to the State Library at the State House in Boston; these copies are subsequently distributed as follows:

- On shelf; retained at the State Library (two copies);
- microfilmed; retained at the State Library
- delivered to the Boston Public Library at Copley Square;
- delivered to the Worcester Public Library;
- delivered to the Springfield Public Library;
- delivered to the University Library at UMASS, Amherst;
- delivered to the Library of Congress in Washington, D.C.

Moreover, this wide circulation is augmented by inter-library loans from the above-listed libraries. For example, a resident of Winchendon can apply at the local library for loan of the Worcester Public Library's copy of any DWPC/OWM report.

A complete list of reports published since 1963 is updated annually and printed in July. This report, entitled "Publications of the Massachusetts Division of Water Pollution Control and Office of Watershed Management 1963-(current year)," is also available by writing to the OWM in North Grafton.

PREFACE

This report is meant to expand upon and clarify the 1990 Massachusetts Surface Water Quality Standards (314 CMR 4.00). It provides a comprehensive listing of Outstanding Resource Waters (ORWs) by naming the tributaries to public water supplies, the ORWs within Areas of Critical Environmental Concern and the ORWs in other specially designated areas. This report also specifically indicates why a waterbody is an ORW.

In concert with the triennial review of the Massachusetts Surface Water Quality Standards a Proposed List of ORWs is being developed. This list will present designations and/or reclassifications for waterbodies. Through the review and public hearing process a new listing of ORWs will then be generated and promulgated together with the 1993 Massachusetts Surface Water Quality Standards.

ACKNOWLEDGEMENTS

The following individuals provided support and contributed time and information to the preparation and completion of this report: Russell Isaac, Division of Water Pollution Control; Alan Cooperman and Robin O'Malley, Office of Watershed Management; Henry Barbaro and Richard Tomczyk, Division of Wetlands and Waterways; Mary Wheeler, Division of Water Supply; and Patricia Huckery, Massachusetts Natural Heritage Program.

I. INTRODUCTION

Outstanding Resource Waters

The Massachusetts Surface Water Quality Standards contain antidegradation provisions (314 CMR 4.04) to maintain existing uses and the level of water quality necessary to protect those uses. As part of these provisions, waters with exceptional socio-economic, recreational, ecological and/or aesthetic values are designated as Outstanding Resource Waters (ORW's). These waters have more stringent requirements than other waters including the virtual prohibition of new or increased discharges of pollutants.

Outstanding Resource Waters include all Class A designated public water supplies and vernal pools certified as such by the Natural Heritage Program of the Massachusetts Division of Fisheries and Wildlife. These are the only two classes that are categorically included in the designation. Other waters may include: National Parks, State Forests and Parks, Areas of Critical Environmental Concern (ACECs) designated by the Secretary of Environmental Affairs, and other waters protected by special legislation. The ORW designation is appropriate for waters where the existing use is so exceptional or the perceived risk is such that no lowering of water quality is permissible.

The purpose of this report is to provide an inventory and directory of those surface waters that have been designated as ORW's. This is intended to be beneficial to those agencies regulating the waters of the Commonwealth as well as the regulated community. The report will be updated every three years as part of the triennial review of Surface Water Quality Standards and will serve as the Division of Water Pollution Control's official interpretation of the ORW regulations.

Inventory of ORW's

ORW's are listed alphabetically by river basin and coastal drainage area. Figure 1 depicts the thirty-two River Basins and Coastal Drainage Areas of Massachusetts. Separate lists are provided in the appendices for 1) rivers and streams; 2) lakes, ponds, reservoirs and impoundments; and 3) coastal and marine waters.

Code

Each named waterbody is assigned a unique identifying five-digit code number that appears to the left of the waterbody name. These codes were developed as part of the "Massachusetts Stream Classification Program: Inventory of Rivers and Streams" and the "Compilation of Lakes, Ponds, Reservoirs and Impoundments." A coding system is under development for coastal and marine waters (Coastal and Marine Inventory System [CAMIS]). When available, codes for coastal and marine waters will be incorporated.

U.S.G.S. Name and Map

Waterbody names and spellings are those depicted on U.S. Geological Survey Topographic Quadrangles. Waterbodies are considered named if they bear a title in the script used for the particular waterbody feature class on the quadrangle. All other waterbodies are considered unnamed. The reference collection of maps used for this report were numbered; this map number appears to the right of the waterbody name under the heading of USGS Map. The corresponding maps are indexed in Appendix A of this report.

It is sometimes difficult to determine what portion of a dendritic stream system is intended to be named and what portions are unnamed. For the purposes of this report named streams are considered to end when they join another named waterbody, unless their continuance is specifically denoted on the map. When a named stream branches into two or more undenoted tributaries, the stream name is considered to extend along the branch joining the named stream at the least angle of incidence. Named streams (and unnamed streams) include any intermittent portions. If a single stream has more than one official name (names sometimes change at political boundaries) the ORW designation applies only to those portions specifically noted in the listing.

The ORW listing does not include unnamed waterbodies unless specifically necessary for a point of clarification. A named waterbody is assumed to include all of its unnamed tributaries (including bordering vegetated wetlands) unless it is specifically denoted otherwise.

The listing of rivers and streams; lakes ponds, reservoirs and impoundments; and coastal and marine waters also includes the municipality in which the ORW portion of the waterbody is located.

Descriptor

The "Descriptor" column of the listing is used to further define and demarcate the waterbodies being designated and/or describe the water use that is protected by the ORW designation.

Abbreviations and terms used throughout the report are defined as follows:

ACEC - Area of Critical Environmental Concern.

Inlet - A stream that directly enters a lake, pond, or reservoir.

Isolated - A waterbody that has no apparent surface connection with another.

Outlet - A stream that directly exits a lake, pond, or reservoir.

PWS - Public Water Supply (Class A water in the Surface Water Quality Standards).

Portion - A segment or part of a waterbody.

Source - The most upstream point of a river or stream.

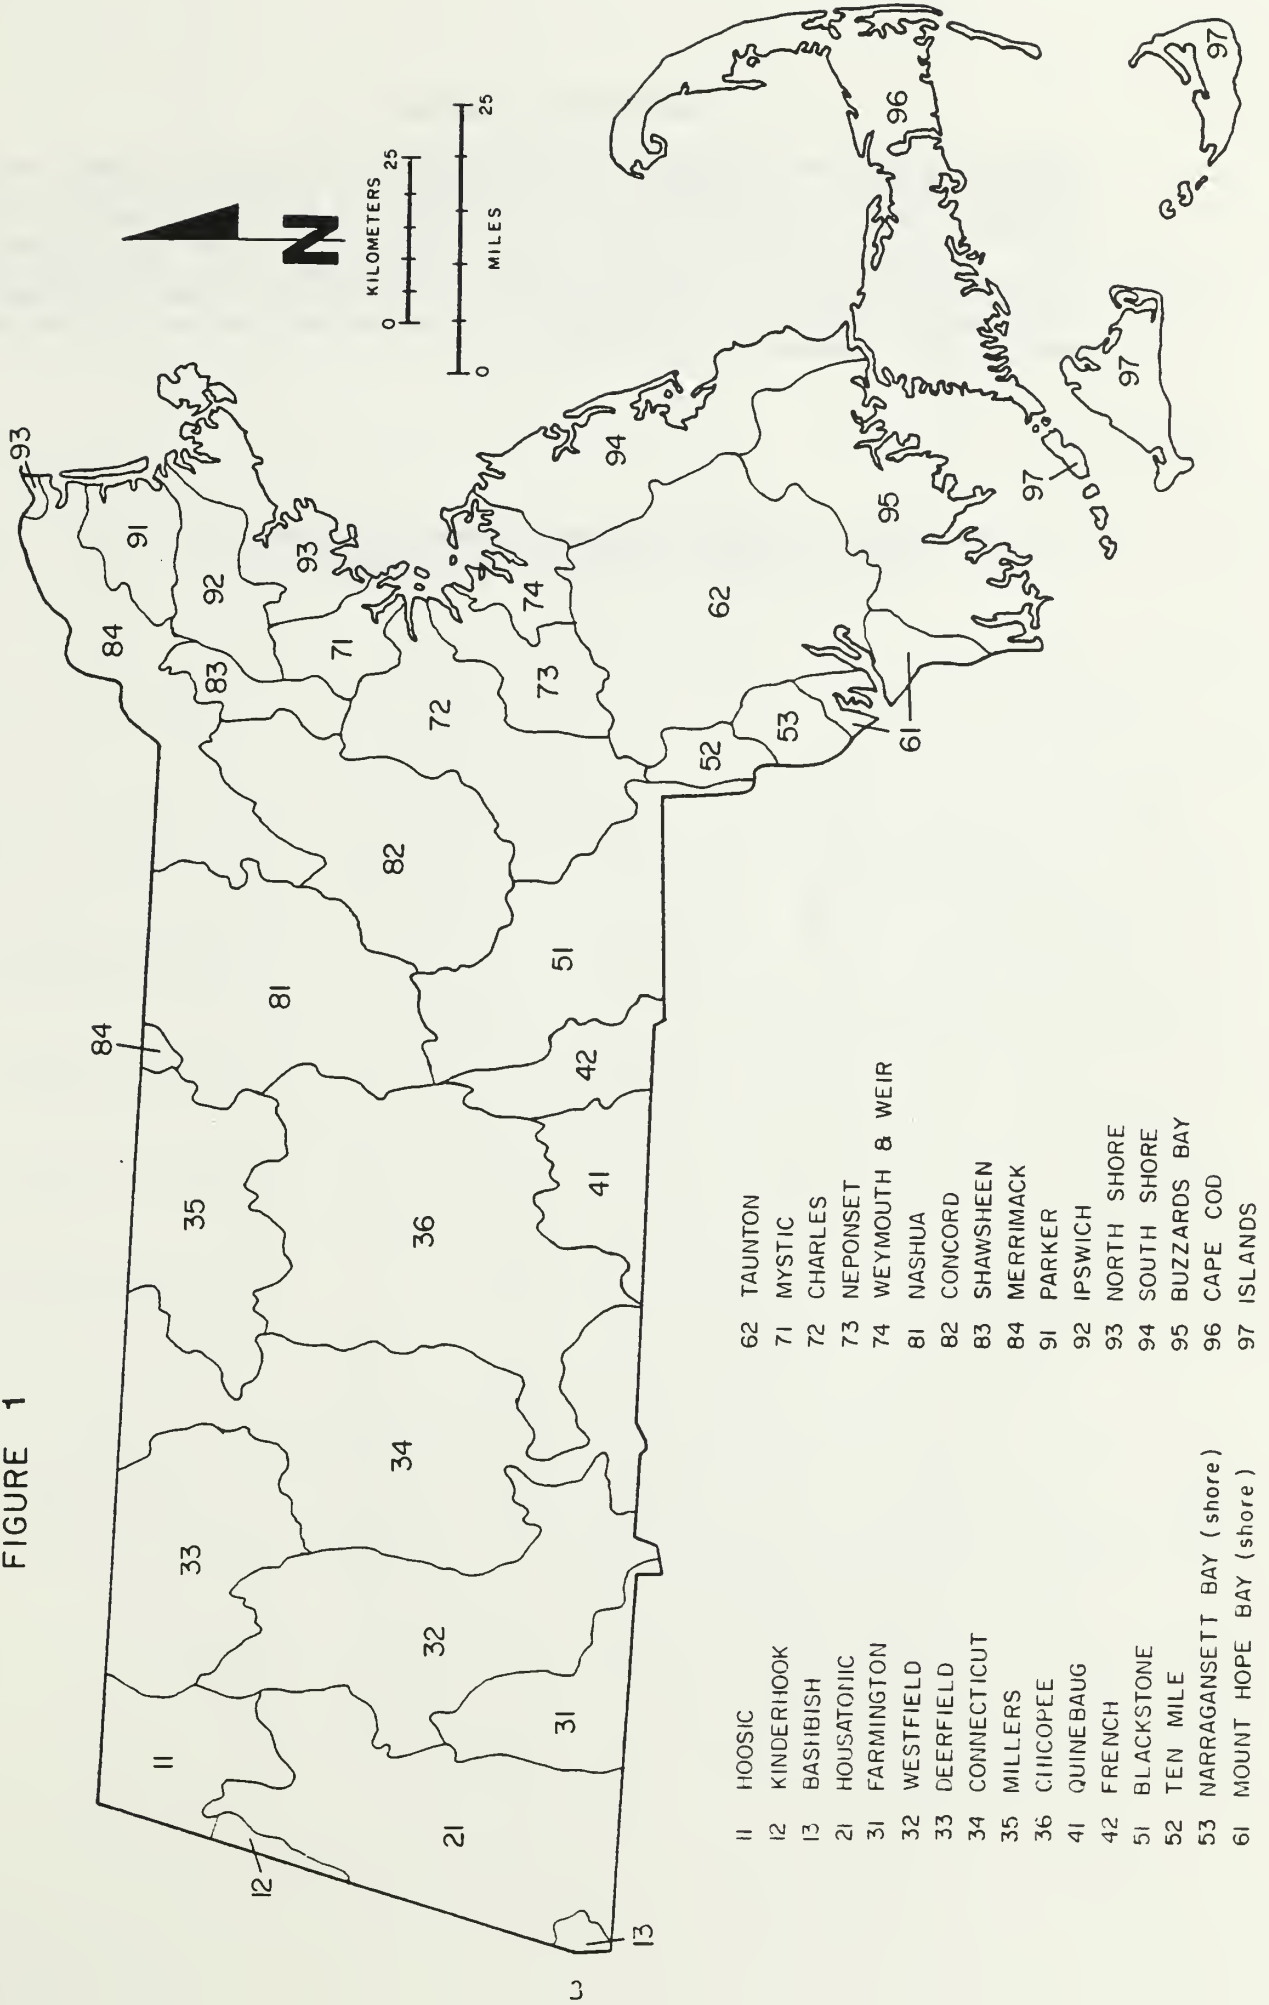

Tributary to PWS - A waterbody that drains to a Public Water Supply. Parentheses around a PWS waterbody name indicates it is a direct tributary whereas brackets indicate it is an indirect tributary.

When a waterbody is designated as an ORW in association with any of the ACEC's or any of the other special designations (e.g., Cape Cod National Seashore, Squannacook and Nissitissit Rivers Sanctuary and North River Protective Order) only that portion of the waterbody within that designation is considered an ORW unless specifically denoted otherwise.

COMMONWEALTH of MASSACHUSETTS

RIVER BASINS and COASTAL DRAINAGE AREAS

FIGURE 1

Directory of ORW's

Appendix B provides an alphabetical listing of rivers and streams that are designated ORW's. Appendix C is an alphabetical listing of lakes, ponds, reservoirs and impoundments that are designated ORW's. Appendix D is an alphabetical listing of coastal and marine waters that are designated ORW's. Appendix E provides a listing of cities and towns that have ORW's within their borders. The appendices are intended to present information in a manner which will be helpful in answering the most often-asked questions by regulators and others.
